Work Experience

Freelance | Senior Web Developer & Systems Consultant

January 2025 - Current

Design scalable, reusable front-end component systems and modern UI architectures.

Implement enterprise-grade analytics pipelines using Google Analytics and Tag Manager for business intelligence and operational insights.

Integrate SEO automation, data tracking, and performance optimization into scalable digital platforms.

Produce technical documentation, system architecture guides, and implementation standards.

Architect and deliver full-stack solutions using React, Next.js, PHP, and JavaScript across Shopify, WordPress, and headless platforms.

Lead accessibility compliance (ADA/WCAG) audits and remediation strategies across large web properties.

Produce technical documentation, system architecture guides, and implementation standards.

CQL Corp | Interface Developer

January 2023 - December 2024

Built custom React + TypeScript component libraries in a headless CMS environment supporting enterprise-scale deployments.

Integrated enterprise platforms including Salesforce to support large-scale loyalty and engagement systems.

Developed structured UI systems aligned with Figma design systems and UX governance standards.

Implemented A/B testing frameworks and analytics pipelines to support data-driven business decision systems.

Led accessibility engineering initiatives across large web and mobile applications.

Delivered production-grade front-end systems supporting global enterprise users.

TaxSlayer | Front End Engineer

September 2021 - December 2022

Developed and maintained .NET MVC applications using C#, React, JavaScript, HTML/CSS in enterprise financial systems.

Built production features across high-availability platforms supporting millions of users.

Collaborated cross-functionally with UX, product, and engineering teams in Agile/Scrum environments.

Delivered scalable front-end solutions integrated into enterprise backend systems.

Supported secure, regulated environments with strict compliance requirements.

GoCollect LLC | Platform Specialist |

March 2019 - April 2020

Designed and implemented API architectures using PHP Symfony and GraphQL.

Built Node.js + React applications for internal business operations systems.

Deployed cloud infrastructure using AWS S3 and Lambda for scalable platform services.

Automated DevOps pipelines using Docker and Ansible, improving deployment reliability.

Created system documentation and onboarding frameworks for enterprise platforms.

Fast Growing Trees | Software Engineer |

January 2018 - February 2019

Migrated legacy systems to modern React + TypeScript architectures.

Built SQL-driven data systems integrating MySQL/MSSQL for business intelligence.

Automated enterprise reporting pipelines and operational analytics systems.

Unified fragmented backend services into cohesive, scalable platforms.

Digital Derm Inc. | Web Design and Administration |

November 2015 - December 2017

Migrated infrastructure to AWS cloud architecture for scalability and cost efficiency.

Implemented secure systems compliant with HIPAA, MFA, and encryption standards.

Built scalable content platforms using WordPress and custom theming frameworks.

Delivered performance-optimized, responsive, enterprise-grade web platforms.
